

## **Surgery Clinic**

### **MACTA - Medical Analysis Constanta**

#### **... First alternative for you!**

- The first private surgery clinic in Constanta (2006)!
- Over 5,000 patients treated in the private system
- The "youngest" patient had 2 weeks, the eldest, 96 years!
- Pediatric surgery, plastic surgery, general surgery - open and laparoscopic, oncological surgery, gynecological surgery, vascular surgery, orthopedics, ENT, with all types of anesthesia!
- **Priorities in Constanta and Dobrogea:**
  - First breast implants immediately after bilateral mastectomy for breast cancer
  - First HAL-RAR- device for hemorrhoidal treatment "without scalpel"
  - First obesity surgery interventions with digestive by-pass
  - "Sentinel node" Sensor for the modern treatment of breast cancer
  - First Breast Core Biopsy

#### **Description :**

**MACTA** Surgery Clinic opened on November 9, 2006 when, under absolut organizational and functional pioneering in Constanta, within Medical Analysis SRL Constanta, Prof. Univ. Dr. Octavian Dumitru Unc paved the way for medical facilities with surgical profile in the area of Dobrogea, assuming both the risks and liability of private surgery practice.

On 17 February 2007, the first surgery is performed, the time since the inauguration of the clinic and the first patient being explained by the fact that both the management team of MACTA clinic and the health structures which had to approve the institution's functioning were taking the first steps in this field.

Since then, more than 5,000 operations have been performed, with a wide spectrum of surgical pathology although the clinic's profile and structure are for "one day surgery"; the patient's demands and the surgical team with multiple therapeutical knowledge, determined and allowed adjustments to the types of surgery, their number, the running program and not least, the satisfaction of all patients.

Today, we are proud to say that we "built" in these over eight years of practice, a "**MACTA brand**" known by Constanta's populatio and also to the surrounding counties and the rest of the country. We can even talk about a special category of patients, with quite a significant number, that is represented by Romanian patients from diaspora, in our clinic's medical records appearing, from now friends, from Italy, Spain, Iceland, Norway, England, USA, Greece, Ireland, France, etc

If the "youngest" patient operated in **MACTA** clinic had 2 weeks, the age deans of " **MACTA family** " were a 92 years old lady, operated for rectal cancer and a 96 years old gentleman, operated for inguinal hernia.

We opened this clinic with the desire of creating a medical space where to "import" that surgical treatment from countries where technically and behavioural there is an advance to what we have in state hospitals.

We wanted to impose in the clinic the respect for the patient, with "warming " the preoperative atmosphere through a behavior from our staff, that understands fear and anguish of patients before surgery, by explaining operations and by encouraging each person.

I would like to mention that there is nothing special to the clinic's staff, the doctors, nurses, orderlies wanting to change the manner of giving medical assistance in Constanta, and I proudly say that we have realized something special at **MACTA**.

We are not conceited so we expect and accept, from anyone, any suggestion or complaint regarding issues that we do not notice or insight, being open to everything that can ultimately please a patient who came for surgery, and who leaves healthy, healed and happy for the medical services provided by us.

**MACTA** surgical specialties are the following:

- **GENERAL SURGERY** – with a full range of surgical procedures related to laparoscopic and classic - open surgery : cholecystitis, appendicitis, umbilical hernia, inguinal hernia and femoral, incisional hernias, hydatid cysts, digestive tumors, ovarian cysts, uterine fibroma, lipomas, suprarenalian tumors , etc.
- **BREAST SURGERY** – is a special surgery given the frequency of breast cancer and risky mastopathies (fibro-cystic) for both benign and malignant tumors. We are proud because of the "Sentinel Node" Probe used in breast cancer as well as for some personal contributions in this type of surgery. Prof. Dr.UNC is founding and honorary member of the Romanian Society of Breast Surgery and also member of the French Society of Senology and Breast Pathology.
- **OBESITY SURGERY** – has a different approach in **MACTA** clinic in comparison to what is practiced in other profile clinics, with a high rate of effectiveness, a reversible surgery being achieved, simple and with a price ten times smaller, being able to perform both in a laparoscopic and open manner.
- **SURGICAL ONCOLOGY** - from thoracic to abdominal location we approach it both by classic and laparoscopic manner. Gastric cancers, colorectal, pancreatic biliary, retroperitoneal, soft tissue or peripheral locations were approached in **MACTA** surgical clinic.

- **PEDIATRIC SURGERY** - phimosis, little children hernias, trauma with different effects and locations benefits from a professional surgeon, recognized for his experience and achievements.
- **ORTHOPEDICS** - with classic surgery but especially with arthroscopy which is equivalent to laparoscopy in general surgery and allows the patients to no longer have the classic giant gypsum and big incisions but only 0.5 cm ones next day discharge on his/her feet. We proudly say that **MACTA** was for a long period of time the only private clinic in Constanta where this type of orthopedic surgery was performed.
- **ENT SURGERY** - from vegetations, tonsils, septal deviations, etc.
- **PLASTIC SURGERY** - with silicone breast implants, liposuction, blepharoplasty, facelift, abdominoplasty, rhinoplasty, etc.
- **VASCULAR SURGERY** - since the beginning of the clinic's activity is an example of professionalism and cooperation with renowned physicians, and currently **MACTA** clinic is enjoying the collaboration with the most academically recognized cardiovascular surgeon, Conf.dr. Marta Budu.
- **INTENSIVE CARE UNIT- ANESTHESIA** - we could not operate without the contribution of our special doctors, with an extraordinary specialty, because of them depends the success of the interventions and also the patients' lives, providing supportive care during and especially after surgeries.

**MACTA** Clinic enjoys working with Medical Analysis Lab, that provides fast and actual results of medical tests that are necessary for an accurate evolution of surgical interventions.

Collaboration with "**CITOSAN**", with dr.MICU LUMINITA and dr.MICU DORIAN (pathological anatomy) ensures us the possibility to have precise diagnoses, the only ones that can confirm or deny the existence of cancer, but also histo-pathological analysis from other operations.

I cannot conclude **MACTA** clinics' staff list without mentioning the nurses from the operating rooms, from the salons or from anesthesia, not only people with great character and an exceptional training but also with... A LOT OF HEART. I thank them on behalf of the patients for their attitude and special behavior in the face of suffering. They are the many and large anonymous of the surgical activity as are the ladies from care unit, orderlies, people who "understood" the "clinics' spirit" and without which those postoperative help gestures of the patients or the cleaning of the wards or other areas from the clinic would suffer.

It is natural I think, to speak well and to praise our workplace but the testimonies of the patients who have passed through the clinic's operating room, sometimes words spoken or written in what I called **MACTA** "Book of Honor" determined us to write in this way.

We know that conditions must be constantly improved, we have to be perfectionists to be successful, but we believe that all the naturally occurring leaks happening to anyone or anywhere, and so in our clinic, are unwilling and thoughtless. We are humans and we know we can make mistakes, thus we cannot and therefore will not "pick the rock" and throw it at our colleagues and especially at our patients.

Our wish in **MACTA** clinic is to do so in order to be a little bit better for everyone, to offer the possibility to perform operations in hotel conditions, technical, conceptual, with quality medical equipment through the work of health professionals who have a different approach of a patient and create other hospital conditions.
